EDUCATION

Integrated M.Tech in Computer Science (AI & ML)	VIT Bhopal University (November/2022)
Learnt the concepts of AIML and Data Science and built projects with the knowledge gained	

WORK EXPERIENCE

Maa Ambay Ashirwad GP, Bhopal	Software Developer Intern (December/2025 - 01/2026)
- Architected and implemented a Python-based production and billing management platform from scratch (PySide6, Pandas), delivering encrypted CSV data handling, automated invoice generation, production tracking, and end-to-end workflow management. - Enhanced factory operations by 40% through process automation and streamlined data pipelines, reducing manual intervention and increasing billing accuracy.	
Techno Planners, Bhopal	Data Science Intern (October/2025 - December/2025)
- Designed and delivered a Python-based production and billing platform from the ground up using PySide6 and Pandas, enabling encrypted CSV data handling, automated invoice generation, production tracking, and end-to-end workflow management. - Automated key factory processes to streamline daily operations, reducing manual intervention and boosting billing efficiency by 40% through robust data pipelines and workflow automation.	

PROJECTS

Sarcasm Detector (Multilingual)
- Developed a multilingual sarcasm detection system using Hugging Face Transformer models (BERT-based) for contextual understanding of text. - Performed extensive text preprocessing including tokenization, stopword removal, and normalization to improve model performance.
Neural Network from Scratch
- Enforced a fully connected feedforward neural network from scratch using NumPy without relying on high-level ML libraries. - Designed forward propagation and manually derived backpropagation using chain rule for gradient computation. - Executed gradient descent optimization with configurable learning rate for model training.
NewsSumm++ (Optimized News Summarization Dataset)
- Designed and developed an streamlined news summarization dataset (NewsSumm++) by refining and cleaning large-scale raw news corpora. - Performed advanced text preprocessing including deduplication, normalization, tokenization, and vocabulary optimization to improve dataset quality.

SKILLS

Python, SQL, C++, Machine Learning, Deep Learning, NLP, ANN, Computer Vision, Feature Engineering, Statistical Analysis, Data Analysis, Data Visualization, Business Analytics, Finance Analytics, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, TensorFlow, PyTorch, MS Excel, PostgreSQL, n8n, Open AI Platform, Google AI Studio, Agentforce, Mindpal, Zapier, Make, Git, Salesforce, MATLAB, AWS, HuggingFace, MongoDB, Data Structures, OOP, DBMS, Probability, Linear Algebra, Numerical Optimization, Calculas, Statistics, PySide6, CSV

CERTIFICATES

AgentBlazer Champion 2026	Salesforce
Generative AI and Machine Learning	RemarkSkill
Python for Machine Learning	Learntube
Git/Github	CodeChef
Deep Learning	IntelliPaat
