

Jayesh Keswani

AI, ML and Data Sci. Intern

-  Bhopal, India
-  +91 9343763531
-  jjayesh2036@gmail.com
-  <https://www.linkedin.com/in/jaykes/>
-  <https://github.com/THATSjai>

Skills

- Python
- SQL
- Machine Learning
- Deep Learning
- Natural Language Processing
- Statistical Analysis
- Feature Engineering
- Artificial Neural Networks
- Data Analysis
- Data Visualization
- AI Agents
- Computer Vision

Tools

- Python- Pandas, NumPy, Matplotlib, Seaborn
- Git
- Libraries- sklearn, TensorFlow, PyTorch
- PySide6
- n8n
- Robo-Analyzer
- Salesforce

Core Concepts

- Data Structures
- Object-Oriented Programming
- Database Management Systems
- Probability and Statistics
- Calculus and Linear Algebra
- Numerical Optimization

Certifications

- AgentBlazer Champion 2026 (Salesforce)
- Generative AI and ML (RemarkSkill)
- Python for ML (Learntube)

Profile

AI and Data Science Engineer skilled in machine learning, NLP, and predictive modeling using Python. Experienced in data pipelines, analysis, and model optimization, delivering data-driven insights through supervised and unsupervised learning techniques.

Experience

- | | |
|---------------------|---|
| Mar 2026 – Present | Machine Learning Intern Suvidha Foundation
Selected for a Machine Learning Internship; preparing to work on data analysis, model development, and deployment of machine learning solutions for real-world applications. |
| Dec 2025 – Jan 2026 | Software Developer Intern MAA AMBAY ASHIRWAD GP, Bhopal
Built a Python-based production and billing system using PySide6 with encrypted CSV data handling. Automated workflows improved billing efficiency by 40% and streamlined daily factory operations. |
| Oct 2025 – Dec 2025 | Data Science Intern TECHNO PLANNERS, Bhopal
Processed banking, YouTube, and advertising records using Python for EDA and data preprocessing. Built and validated ANN/MLP models using Scikit-learn, TensorFlow, and PyTorch, improving prediction accuracy by 18% for strategy optimization. |
| Jan 2025 – Mar 2025 | Data Science Intern FINLATICS
Analyzed marketing records using KPI metrics, improving targeting insights by 20%. Optimized ETL pipelines, increasing processing efficiency by 40% and supporting data-driven decisions. |

Education

- | | |
|----------------|--|
| 2022 – Present | Integrated M.Tech in Computer Science VIT Bhopal University
(Artificial Intelligence and Machine Learning) |
|----------------|--|

Projects

- | |
|---|
| Sarcasm Detector with multi-language support Python, NLP
Developed a multilingual sarcasm detection system using Hugging Face Transformer models (BERT-based) for contextual understanding of text. Performed extensive text preprocessing including tokenization, stopword removal, and normalization to improve model performance. |
| Neural Network from Scratch Python, NumPy
Implemented a fully connected feedforward neural network from scratch using NumPy without relying on high-level ML libraries. Designed forward propagation and manually derived backpropagation using chain rule for gradient computation. Implemented gradient descent optimization with configurable learning rate for model training. |
| AI Agents Automation Python, n8n, Salesforce
Engineered and deployed AI-powered agents using Python and n8n for automating multi-step workflows and decision-making processes. Integrated Salesforce APIs for seamless data exchange, enabling real-time task automation and intelligent event-driven actions. |
| NewsSumm++ (Optimized News Summarization Dataset) Python, NLP, Data Engineering
Designed and developed an optimized news summarization dataset (NewsSumm++) by refining and cleaning large-scale raw news corpora. Performed advanced text preprocessing including deduplication, normalization, tokenization, and vocabulary optimization to improve dataset quality. |
